Comment Reasons:

Comment:

I am a resident and a school-run parent residing at UK.

I object to DM2025/01591 because the proposal would cause unacceptable harm to highway safety, parking stress, and residential amenity in a constrained residential area, particularly during school-run and evening peaks.

I live at 25 Holland Avenue, SM2 6HW which is very near to the site. I regularly use the roads adjacent to the site in dispute in Belmont. I regularly experience heavy parking during school drop-off/pick-up. The pavements remain blocked by vehicles. There is always very poor visibility at the junctions near to the site due to parked cars. On several instances, drivers doing three-point turns/reversing in the adjacent cul-de-sac roads cause extremely unsafe and vulnerable situation for kids and family travelling through the area.

Last week I saw an elderly woman was experiencing difficulty in travelling along the pavement with her own wheel chair due to increased vehicular traffic on the road adjacent to the site. On several instances, I have seen young families face extreme difficulty while travelling with kids and buggies along the road and pavements adjacent to the site due to increased traffic and vehicular movements.

The area is a school-run environment and already has high pedestrian movement. Any increase in drop-offs, circulating traffic, and on-street parking will reduce visibility and increase risk to children and pedestrians.

At school run time, near Dorset road and Balmoral way junction and in areas adjacent to the site, children frequently cross and cars already struggle and visibility is blocked. Usually busy cars mount the kerb.

The applicant's own Transport Statement indicates significant overspill:

Worst case refers to up to 80 vehicles locally.

TRANSPORT_STATEMENT-6060376

Only 14 on-site spaces (with an assumption 3 may be staff), leaving 69 vehicles on-street in the worst case.

This level of overspill would lead to blocked driveways/pavements, unsafe manoeuvres and obstruction risks.

My driveway / my neighbour's driveway is often blocked already on week days. Cars already park close to corners, making it hard to see pedestrians.

The applicant's Fire Strategy states a maximum building capacity of 297 persons.

FIRE_STATEMENT_FIRE_STRATEGY_DO...

The Design & Access / Planning Statement references that up to 250 attendees might depart around 11pm for Friday prayers / large community events.

Late dispersal in a residential area can cause disturbance (voices, car doors, engines idling, vehicles searching for parking).

Noise travels in the evening and residents are disturbed by existing noise source already.

Local streets include cul-de-sacs and limited turning space, so extra parking/circulation leads to reversing, three-point turns, and obstruction. Any double-parking or drop-off stopping can cause disproportionate congestion.

Vehicles often have to reverse or do three-point turns near the junction of Dorset Road and Balmoral Way.

Nearby venues already create evening/weekend traffic and parking demand. The proposal should be assessed against cumulative event overlap, not in isolation.

I request Sutton Council to refuse DM2025/01591 outright due to unacceptable highway safety,

parking and amenity impacts.
