Stance: Customer objects to the Planning Application

Comment Reasons:

Comment: We would like to raise an objection to the planning application, as the proposals present several significant concerns for residents living in this quiet, residential area. While the application suggests that the center may attract around 120 people, it is not realistic or practical to restrict attendance at Friday prayers. The Council therefore has to consider the genuine worstcase scenario: that the building could reach its full capacity of approximately 250 people, with activities continuing until the proposed closing time of 11pm.

This raises a number of issues that would directly affect the well-being and safety of the local community:

1) Noise and Late Evening Disturbance

This neighborhood is home to families, older residents, and people who work early mornings. The prospect of up to 250 people leaving the site at 11pm would inevitably create significant noise and disruption at a time when the area is normally quiet. This level of late evening activity is not compatible with the character of the surrounding residential streets.

2) Traffic and Highway Safety

The site is located just 100 meters from a large Avenue Primary Academy with over 1,000 pupils. During school dropoff and pickup times, the surrounding roads already experience heavy congestion, high pedestrian activity, and limited visibility. Introducing a facility that could attract up to 250 additional visitors-particularly during Friday prayers, which overlap with school finishing

times-would create severe traffic pressure and increase the risk of accidents. The combination of high pedestrian volumes, parked cars, and increased vehicle movements would be chaotic and unsafe.

3) Parking Pressure

Parking in the area is already extremely limited, especially during school hours and evenings. The application does not demonstrate how it will accommodate the parking needs of such a large number of visitors. Over-spill parking onto surrounding streets would place additional strain on residents, obstruct driveways, and create further safety hazards for children and families walking to and from the nearby school.

4) Cumulative Impact on the Community

When considering noise, traffic, parking, school-related congestion, and late-night activity together, the cumulative impact on the neighborhood would be considerable. The scale and intensity of the proposed use are not in keeping with the residential setting, and the application does not provide adequate mitigation to protect the amenity, safety, and quality of life of those living nearby.

Therefore we ask the Council to refuse DM2025/01591 due to unacceptable impacts on highway safety, parking, residential amenity, emergency access and cumulative impact on the community.
