Stance: Customer objects to the Planning Application

Comment Reasons:

Comment: The proposed site is situated within an area already subject to substantial traffic congestion and acute peak-time pressure. The immediate vicinity includes a primary school with a pupil capacity in excess of 1,000, generating exceptionally high volumes of pedestrian and vehicular movement during morning drop-off and afternoon pick-up periods. These times are characterized by congestion, limited parking availability, reduced visibility at junctions, and increased vulnerability for children and accompanying parents.

In addition, nearby recreational facilities, including tennis courts and an elderly residents' golf facility, contribute to sustained vehicle circulation throughout the day and evening. These uses attract both regular visitors and older residents, many of whom may have reduced mobility, thereby heightening the sensitivity of the area in terms of highway safety and pedestrian protection.

The introduction of a community hall, temple, mosque, church, or any comparable assembly use would inevitably result in concentrated arrival and departure patterns, particularly during evenings, weekends, and religious or community events. Such uses typically generate peak, overlapping traffic flows rather than dispersed movements. This would significantly intensify existing congestion, exacerbate on-street parking stress, increase instances of obstructive or unsafe parking, compromise emergency vehicle access, and materially reduce road safety for schoolchildren, elderly residents, and other pedestrians.

When assessed cumulatively, the existing pressures and the sensitive character of surrounding uses clearly demonstrate that the site is unsuitable for further high-intensity, assembly-based

development. The proposal would materially worsen highway safety conditions and adversely affect residential amenity.
