Commenter Type:

Stance: Customer objects to the Planning Application

Comment Reasons:

Comment: I write to formally object to planning application DM2025/01591 for the proposed mosque/community center

My objection is based on material planning considerations, specifically highways impact, parking provision, residential amenity, and noise.

-Traffic Generation, adding to school and bowling club traffic

Under the National Planning Policy Framework (NPPF), development should only be approved where the residual cumulative impacts on the road network are not severe. The proposed use is likely to generate concentrated peaks of traffic, particularly on Fridays and during religious festivals and upward of 5 times a day.

The surrounding highway network consists of predominantly residential streets and cul de sacs, that already experience congestion. Increased vehicle movements at peak times raise concerns regarding pedestrian safety, obstruction, and access for emergency vehicles. I request that a full Transport Assessment and robust trip-generation data be scrutinised carefully.

-Parking Provision

The application does not appear to demonstrate adequate on-site parking to meet likely demand. Inadequate provision risks overspill parking on nearby residential streets, which would adversely affect residential amenity and highway safety.

Local Plan policies typically require development to provide appropriate parking provision and not result in unacceptable on-street parking stress. I request that the council assess compliance with adopted parking standards and consider a parking management condition if approval is contemplated.

-Noise and Residential Amenity

The NPPF and local development plan policies seek to protect existing residential amenity from unacceptable noise impacts. The scale of gatherings and associated activity may give rise to noise from vehicle arrivals/departures, congregation outside the premises, and any amplified sound.

If any external call to prayer or amplified sound is proposed, this could materially affect neighbouring residents' quiet enjoyment of their homes. A detailed Noise Impact Assessment should therefore be required. If approved, conditions should restrict external amplification and control hours of use to safeguard amenity.

-Intensity of Use

The proposed scale and intensity of the development may be out of keeping with the character of the surrounding residential area. The cumulative impact of traffic, parking, and noise would represent an overdevelopment of the site in planning terms.

For the reasons above, I request that the application be refused.
