Stance: Customer objects to the Planning Application

Comment Reasons:

Comment: I am writing to formally register my strong objection to planning application DM2025/01591 on the grounds that the proposed development represents an unsustainable intensification of use that is fundamentally incompatible with the residential character of the local area. My primary concern pertains to Highways and Pedestrian Safety; the applicant's transport assessment appears to significantly underestimate the "trip generation" and peak-time traffic volume associated with a place of worship of this scale. The surrounding residential infrastructure is already operating at capacity, and the inevitable "overspill" parking onto narrow neighboring streets will create hazardous bottlenecks, obstructing access for emergency services and delivery vehicles while endangering local school children and elderly pedestrians. Furthermore, the proposed parking provision is mathematically insufficient to accommodate the expected number of worshippers, which will lead to a permanent and detrimental shift in the local parking equilibrium. Beyond traffic, the proposal constitutes a severe Loss of Amenity for immediate residents. The transition from the site's current use to a high-occupancy community hub will result in a substantial increase in ambient noise levels, specifically regarding the "comings and goings" of visitors during sensitive early morning and late evening hours. This includes the cumulative noise of car doors, idling engines, and congregating groups, which will shatter the quiet enjoyment of nearby gardens and bedrooms. From a Design and Character perspective, the scale, massing, and height of the proposed structure are out of proportion with the established street scene. The development appears "cramped" and overbearing, violating Policy 28 of the Sutton Local Plan, which requires new developments to respect the local context and visual amenity. The height of the building will likely result in a significant loss of natural light (overshadowing) and a direct loss of privacy for the occupants of adjoining properties due to overlooking windows. Finally, the environmental impact of such a large-scale construction on a constrained site has not

been adequately mitigated. The increase in non-porous surfaces raises concerns regarding local surface water drainage and potential flood risks. The proposed development does not offer sufficient public benefit to outweigh the significant harm it will cause to the safety, privacy, and character of this neighborhood. For these reasons-centered on traffic congestion, noise pollution, and architectural incongruity-I urge the Planning Committee to refuse this application in its entirety and protect the integrity of our residential community.
