Summary objection (1-2 sentences)

I object to DM2025/01591 because the proposal would cause unacceptable harm to highway safety, parking stress, and residential amenity in a constrained residential area, particularly during school-run and evening peaks.

Also an important bus route where the buses already struggles during morning and evening rush hours

My local context

I leave on Holland Avenue and today I am already experiencing major traffic issues (And at times a grid lock situation which could take up a considerable amount of time to resolve). Parking has become a major issue as well as either Dorset Rd, Holland Avenue nor Avenue Rd have space to park at anytime let alone during peaks times. At peak times the lack of street parking can lead to major risk to pedestrians and the residential Homes around the junctions.

Lack of parking discipline due peak times results in "poor visibility at junctions resulting in greater risk of accidents due to children and parents crossing the junction by foot

Other issues is drivers doing three-point turns/reversing in cul-de-sac

Parks cars and vans also make it difficulty for buggies / elderly residents / wheelchair users".

Highway safety and school-run concerns

The area is a school-run environment and already has high pedestrian movement. Any increase in drop-offs, circulating traffic, and on-street parking will reduce visibility and increase risk to children and pedestrians.

Personal example:

Between 8:40am and 8:55 am near junction of Dorset , Holland Vanie and Avenue where children frequently cross and cars already struggle due to visibility issues by cars mount on the kerb.

Parking shortfall and overspill (use applicant's own numbers)

The applicant's own Transport Statement indicates significant overspill:

Worst case refers to up to 80 vehicles locally.

TRANSPORT_STATEMENT-6060376

Only 14 on-site spaces (with an assumption 3 may be staff), leaving 69 vehicles on-street in the worst case.

This level of overspill would lead to blocked driveways/pavements, unsafe manoeuvres and obstruction risks.

During peaks hours most driveways around this junction are often blocked.

Cars already park close to corners, making it hard to see pedestrians crossing the junction.

Intensity of use and late-hour dispersal

The applicant's Fire Strategy states a maximum building capacity of 297 persons.

FIRE_STATEMENT_FIRE_STRATEGY_DO...

The Design & Access / Planning Statement references that up to 250 attendees might depart around 11pm for Friday prayers / large community events.

Late dispersal in a residential area can cause disturbance (voices, car doors, engines idling, vehicles searching for parking).

Personal example:

"Noise travels early mornings and in the evening and residents are disturbed by existing noise source during festival periods in the Overton Park. Such noise politic over peaceful Weekend is unacceptable in this quiet residential Vicinity.

Cumulative impact (other local venues/events)

Nearby venues already create evening/weekend traffic and parking demand. The proposal should be assessed against cumulative event overlap, not in isolation.

What I'm asking the Council to do

I ask Sutton Council to refuse DM2025/01591 due to unacceptable highway safety, parking and amenity impacts in this quiet residential area.
