Stance: Customer objects to the Planning Application

Comment Reasons:

Comment: Dear Planning Officer,

I am writing to formally object to the above planning application. I live at 129A Burdon lane very near to the proposed development, and I am concerned that the proposal would have a significant adverse impact on highway safety and residential amenity.

My objection is based on the following material planning considerations:

1. Inadequate Road Capacity and Highway Safety

The road is narrow and already experiences constrained vehicle movement, particularly when cars are parked on both sides. The additional traffic likely to be generated by the proposed use would intensify congestion and create conflicts between vehicles, cyclists, and pedestrians. This raises genuine highway safety concerns, especially at peak usage times.

2. Existing Parking Stress and Overspill Risk

On-street parking on the road is already heavily oversubscribed, with residents frequently struggling to find spaces close to their homes. The proposal does not appear to provide sufficient on-site parking to accommodate peak demand, making overspill parking onto surrounding residential streets highly likely. This would worsen access for residents and could impede emergency or service vehicles.

3. Noise and Disturbance to Residential Amenity

The nature and intensity of the proposed use would introduce increased activity levels, including

vehicle movements, arrivals and departures, and general congregation of visitors. Given the close proximity of residential properties and the current quiet character of the street, this would result in noise and disturbance that is materially harmful to the living conditions of nearby residents, particularly during evenings and weekends.

4. Impact on the Character of the Street

The road functions as a primarily residential environment with limited capacity to absorb higher-intensity uses. The scale of activity associated with the proposal would be out of keeping with the existing character of the area and would erode the residential nature of the street.

5. Lack of Demonstrated Mitigation Measures

There does not appear to be clear or robust mitigation to address traffic management, parking demand, or noise impacts. Without effective controls, the development risks causing ongoing and cumulative harm to neighbouring amenity and local road conditions.

Conclusion

For the reasons outlined above, I believe the proposal would result in unacceptable impacts in terms of highway safety, parking pressure, and residential amenity. I respectfully request that the application be refused, or that significant amendments and enforceable mitigation measures be required before any approval is considered.

Thank you for your time and consideration of these comments.

Yours faithfully,
Mirrette Selim
