Comment Reasons:

Comment: Impact on Child Safety

Belmont is a family-oriented village where children frequently walk to school, play in local parks, and cycle.

Increased Risk: The influx of high-volume traffic in a quiet residential zone significantly increases the statistical likelihood of road traffic accidents involving minors. Reduced Visibility: Illegal or opportunistic parking caused by the lack of facility space creates "blind spots" at crossings, making it dangerous for children to navigate their own neighborhood safely.

Community Well-being

Belmont has a significant population of elderly residents who have chosen this village for its tranquility and ease of mobility. The proposed development introduces several stressors that would disproportionately affect them:

Mobility and Obstructions: Elderly residents, particularly those using walking aids or mobility scooters, rely on clear pavements. Overspill parking caused by a lack of on-site spaces will force these residents off the footpaths and into the road, creating a significant physical danger. Loss of Tranquility: Many of our senior residents suffer from age-related health conditions that require a calm, predictable environment. The sudden transition to a high-traffic, high-noise area can lead to increased anxiety and a sense of displacement within their own community. Pedestrian Safety: Slower-moving pedestrians are at the highest risk when traffic volume increases on narrow village roads. The increased frequency of vehicles turning and reversing in tight spaces poses a direct

threat to the safety of our older neighbors.
