Stance: Customer objects to the Planning Application

Comment Reasons:

Comment: The traffic in the area surrounding the proposed development is already currently a difficult issue. Currently, at peak times there is a safety concern when crossing Avenue Road, Holland Avenue, York Road, and Dorset Road. It is difficult currently for pedestrians who require additional time when crossing the roads (the elderly, parents/guardians with young children and/or pushchairs). With the proposed increase of 70+ cars with the new development and no consideration to local road safety, the petition is not suitable to the local area. Especially considering the safety of school children who attend the Avenue primary school (1034 children) but also to the children commuting to the local secondary schools. In terms of safety, the petition is not feasible.

Currently, parking in the area at peak times causes many problems from the residents of the surrounding roads and bus routes of the proposed development. During peak hours, residents face parked cars obstructing their driveways as well as obstruction when pulling out of driveways. The hail and ride sections of the S4 and S2 bus routes often are restricted when pulling into to stop as peak parking blocks dropped curbs. This is a particular issue for our vulnerable residents of the surrounding roads around the proposed development. The roads close to the proposed development have additional parking issues as there are already many social centres including the church on north down road (excessive parking at peak times including the weekends for additional services), the downs social club (which holds tennis, other exercises classes, and social events) and the Sutton bowling club. These social centres often have cars parked inappropriately (on corners, over dropped curbs, yellow lines etc). Therefore the addition of 70+ cars with only 12 parking spaces at the proposed development would be dangerous.

The current condition of the road surfaces is appalling and is regularly patched. Currently there are approximately 20 pot holes in Holland avenue with the current throughput of traffic. Therefore the

increase of cars would only add to the current problem. The surrounding roads of the proposed development are already used a cut through from the a217 to the Brighton road and without better road infrastructure, the condition of the road surfaces will only escalate.

Previously there was very little noise pollution when the site was an ambulance station and as a resident of over 50 years, it rarely bothered myself. However, in recent years the noise pollution comes from the local social centres. As with the plans of potential dispersal of up to 250 people up to 11pm at night, the noise pollution for the residents of the surrounding roads would increase dramatically which affects the quality of life to the residents. Especially the vulnerable residents that live locally (many nursing homes and elderly residents).
